Mjólnir

The Vaavud Mjólnir is designed to capture wind speed using two rotating cups along with internal magnets to seamlessly communicate with your device. Its unique design makes it pocket friendly and super rugged.

Sleipnir

The Vaavud Sleipnir is designed to capture wind speed and direction using two curved blades. Meanwhile, The internal optic sensor records 44,100 measurements per second allowing for extreme accuracy.

Both wind meters are supplied with a neoprene protective bag included.
